

Rafael Schwart, PMP

Miami, FL | 786.781.3161 | rrgschwart@hotmail.com | Senior Operations Program Manager

[linkedin.com/in/rafaelschwart](https://www.linkedin.com/in/rafaelschwart)

SUMMARY

Senior operations and program manager, 10+ years taking hardware from pilot build to contract manufacturer production across automation, AR devices, medical robotics, aerospace, and electronics. Released \$10M of Q2 2025 revenue through risk ramp and early material pulls, and raised rolled first time yield from about 65% to 92% across four radio launches. Manufacturing Execution System (MES) and process engineering foundation, now running New Product Introduction (NPI) supply chain programs and AI initiatives on the Supply Chain AI POD at Motorola Solutions.

CERTIFICATIONS

- **Project Management Professional (PMP)**, Project Management Institute, License 4175706
- **Six Sigma Green Belt**, process capability, DMAIC, and statistical process control
- **Anthropic Certificates of Completion**, 2026: Claude 101, Claude Code 101, and Introduction to Claude Cowork

SKILLS

- **Program and Operations Management:** New Product Introduction (NPI) program plans, rhythm of business (ROB) cadences, gate readiness reviews, risk registers and dependency maps, MS Project schedules, OPEX, CAPEX, and manufacturing cost per unit (MCPU) accountability
- **Process and Manufacturing Engineering:** MES route and work instruction setup, tech transfer to contract manufacturers, fixture, jig, and tooling readiness, EVT, DVT, and PVT through ramp, capability studies (SPC, GR&R, Cpk), Kaizen and 6S, SolidWorks, Creo, Mastercam, FEA and CFD, GD&T
- **Supplier and Product Quality:** production part approval process (PPAP), SICR, process failure mode and effects analysis (PFMEA), process control plans, IQ OQ PQ validation, measurement system analysis, nonconformance and CAPA, 8D root cause analysis
- **Design for Excellence:** design for manufacturability (DFM), assembly (DFA), and test (DFT) reviews against ASME standards, GD&T and tolerance review, part and assembly qualification, ECN and ECR impact assessment
- **Supply Chain Operations:** clear to build (CTB) analysis, capacity and build planning, shortage and expedite management, logistics lane readiness, HTS and INCOTERMS, excess and obsolete risk, end of life readiness
- **Systems and Industry 4.0:** SAP and Oracle ERP, MES and Metric Quality Systems (MQS) integration, Windchill PLM and PDM, Power BI and Excel executive dashboards, Visio process mapping
- **AI and Workflow Automation:** Claude Code, Claude Cowork, OpenAI Codex, Google Gemini, Windsurf, Devin AI, n8n, Make.com

EXPERIENCE

Motorola Solutions | Senior Operations Program Manager, NPI Supply Chain (May 2024 to Present)

- *Plantation, FL. Scope: Radio division (APX N70 and N70 XE, Mobile NextGEN DVR). NPI supply chain across R&D, Manufacturing, Logistics, and Quality, with OPEX, CAPEX, and MCPU budget accountability.*
- Delivered **\$10M of Q2 2025 revenue** by taking the **N70 XE 7/800** through risk ramp and early material pulls to close the quarter on schedule.
- Raised **rolled first time yield from about 65% to 92%** across four consecutive radio ramps, from the N70 VHF standard launch through N70 XE 7/800, UHF XE, and Aloha VHF XE.
- Held NPI builds to on time readiness gates by running the **weekly rhythm of business** with status by workstream, a risk and action log, a dependency tracker, and a directly responsible individual on every item.
- Kept lifecycle health and escalations visible from EVT, DVT, and PVT through ramp and end of life changeover by owning milestone tracking and **Power BI KPI packs** for material readiness, test yields, capacity, on time delivery, MRB, RMA, and DPPM.
- Prevented line downs by partnering with Logistics on lane security, HTS and INCOTERMS alignment, and contract manufacturer ship readiness, and by running pull ins, alternates, and **shortage and expedite boards**.
- Protected build commits from quality escapes by leading **PFMEA, control plan, GR&R, and PPAP and SICR** reviews with suppliers and gating ECOs through **Windchill PLM** for control plan adherence.

- Removed the weekly manual rebuild of material coverage and milestone status by specifying **automated clear to build and program management workflows** through the **Supply Chain AI POD**, the group that reviews and greenlights NPI supply chain initiatives.
- Specified **AI driven DFM, DFA, and DFT checks** that grade drawings and assemblies against **ASME standards** before release to suppliers, aimed at shortening part and assembly qualification.
- Surfaced missing failure modes and controls in the **PFMEA and process control plans** by using AI search and suggestion engines to mine failure history, targeting rolled first time yield.
- Built customized **MQS factory views** of test and yield performance by line and product for the end of quarter revenue calls, integrating AI into the quality system.

Magic Leap | Senior Manufacturing Engineer, NPI (January 2023 to May 2024)

- *Plantation, FL. Scope: AR optical device builds in a Class 100 cleanroom. Process development, MES analytics, PFMEA libraries, and tech transfer to contract manufacturers.*
- Delivered a verified **15% efficiency gain and 15% station throughput increase** on AR optical device builds by mining MES analytics to target defects by Pareto and updating the PFMEA control plans.
- Eliminated planning mismatches by configuring **MES routes, work instructions, and data collection plans** with IT and Operations and aligning them to ERP item status and BOM effectivity.
- Cleared pilot builds for contract manufacturer production by leading **tech transfer**, supplier validation of fixtures, jigs, and calibration, and **capability studies (SPC, GR&R)** through readiness sign off.
- Kept scope baselines intact through ECN and ECR changes by managing PLM impact and coordinating fixture, tooling, and test station readiness with Engineering and Operations.

Stryker | Senior Process and Manufacturing Engineer (January 2020 to December 2022)

- *Weston, FL. Scope: Surgical robotics. Supplier qualification, process validation, control plan ownership, and continuous improvement.*
- Held purchase order release to gate criteria by running **PPAP and SICR packages** with Tier 1 suppliers, covering PFMEA, control plan, process flow, MSA (GR&R), and **IQ OQ PQ validation**.
- Cut cycle time and variability on critical subassemblies through tighter process controls, which accelerated PPAP approvals, improved on time delivery to builds, and lowered rework.
- Locked process control by converting action items into **manufacturing action plans** and releasing controlled work instructions and control plans through PLM, including end of life transitions with last time buys and alternates.
- Closed field and line issues to verified effectiveness by leading **8D root cause analysis** and owning nonconformance and CAPA plans, with status to executives on due date adherence.

Gables Engineering | Mechanical Engineer, Test Engineering and Automation (July 2018 to August 2019)

- *Coral Gables, FL. Scope: Mechanical design, test automation, and controlled documentation for regulated aerospace systems.*
- Cut touch screen testing time **60%** by designing the G7332 display and touch screen calibration fixture with integrated pneumatics, sensors, and calibration platforms.
- Raised testing throughput about **50%** by leading the mechanical and pneumatic design of the automated test equipment fixture for the **Boeing 737 G7332** panel, which validated GPS and radio display units without manual setup.
- Streamlined ECN and ECO workflows by deploying **SolidWorks PDM** across the department for file version control and document traceability.

Robotray, Terrasmart, Prompt Aero, General MRO Aerospace | Mechanical Engineer (2014 to July 2018)

- *Florida. Scope: Industrial automation, solar tracking, CNC manufacturing, and aerospace maintenance, repair, and overhaul.*
- Took industrial automation systems, CNC programs, solar tracking systems, and FAA compliant aerospace test fixtures from concept to production by validating each design with **FEA and CFD** and improving NDT, plating, and welding processes.

EDUCATION

Bachelor of Science in Mechanical Engineering | University of Miami (2010 to 2014)

Program Management and Manufacturing concentration. Coursework in CAD, FEA, manufacturing processes, and WBS.
